

- 4- Possible contribution of chemo-heterotrophic activity to the SPOM pool besides chemo-autotrophy in the suboxic/anoxic transition layer.

**Acknowledgements-** The authors thank to Prof. James Murray, the chief scientist of 2001 R/V KNORR - Black Sea cruise, Peng Feng for her assistance during isotopic measurements, technicians of METU - IMS and captain and crew of R/V KNORR for their helps. CTD data were obtained from METU-IMS and KNORR-2001 web page ([oceanweb.ocean.washington.edu/cruises/Knorr2001](http://oceanweb.ocean.washington.edu/cruises/Knorr2001)) for autumn 1999 and May 2001, respectively.

## Introduction

Due to the low productivity at the surface, nitrogen. Many of the studies have been cited therein). However, limited to a couple of studies focuses on nitrogenous nutrients of new and regeneration and Nitrogen Cycle between Museum of Marine Sciences investigate the rates, productivity in the rates,  $\text{NO}_3$  and N

## Sampling

The experiment was conducted in 1998 and in September 2001. KNORR, covered
